London Borough of Barnet Pension Fund – Pension Non-Administration Risk Register

Evaluating risks and Risk Matrix

The LBB Pension Fund evaluates the pension administration risks on a four-point scale on the likelihood of the risk occurring and the impact caused should the risk occur. Risks are evaluated with their controls in place. Risks are plotted on a risk matrix (see below) and prompt action will be taken on those risks that fall into the red zone. Action is considered for “yellow” risk, while “green” risks are regarded as acceptable.

Risk Velocity

Risk Velocity is defined as the time to impact (i.e., an estimate of the timeframe within which a risk may occur). The Pensions Team use a traffic light system to classify how risk velocity measured:

Risks

- very rapid; within a couple of days
- risk may occur within a few days up to a couple of months
- a slow impact that may occur over several months or more

Risk Scores

The risk scores are calculated as Likelihood x Impact.

As the Impact tends to be fixed, it is the Likelihood that requires risk management.
